DATA WAREHOUSING AND BUSINESS INTELLIGENCE (IT3021)

Year 03 Semester 01 – 2025

ASSIGNMENT 2

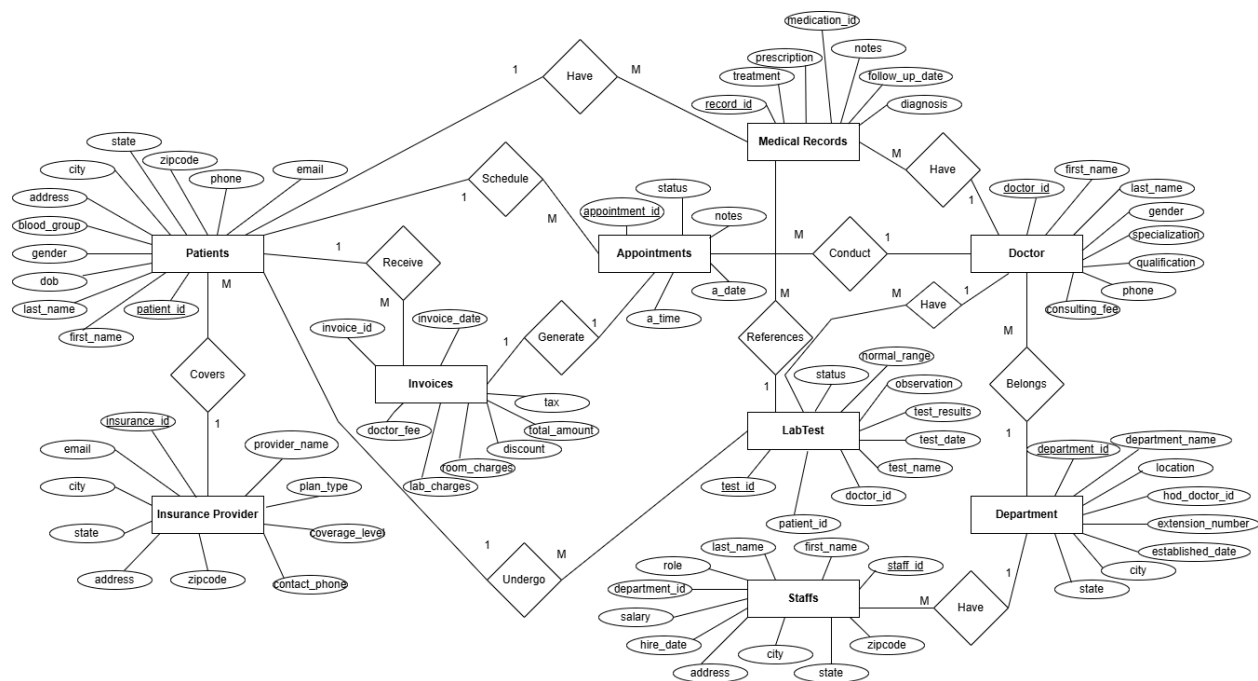

BY M.Y IQRA [IT22071620]

Step 1

1.1 Description of the DataSet

For this project, I designed and developed a simulated Healthcare operational system. Multiple files and database tables were prepared to handle healthcare transactions. The system included data for patient management, doctors, appointments, medications, lab tests, departments, and insurance providers

1.2 ER DIAGRAM

Description of the DataSources

The data was sourced from the Datawarehouse database[HospitalDW] after completing the ETL(Extract,Transform,Load) process .This ensured that the data was cleaned,standardized and optimized for analysis before importing into SSAS Cube and PowerBI

The original raw data was available in two formats:

- ✓ CSV [Comma-seperated Values] files
- ✓ Patients.csv

- ✓ Doctors.csv
- ✓ Appointments.csv
- ✓ Medications.csv
- ✓ InsuranceProviders.csv
- ✓ LabTests.csv
- ✓ Medical.Records.csv
- ✓ Invoices.csv

- ✓ SQLdatabase tables [For Direct Extraction)

TxnUpdate

STEP 2

Created the Following Dimensions

- ✓ Patient Dimension
- ✓ Doctor Dimension
- ✓ Date Dimension
- ✓ Medication Dimension
- ✓ Insurance Dimension
- ✓ Department Dimension

Implemented Hierarchies

Date Hierarchy:

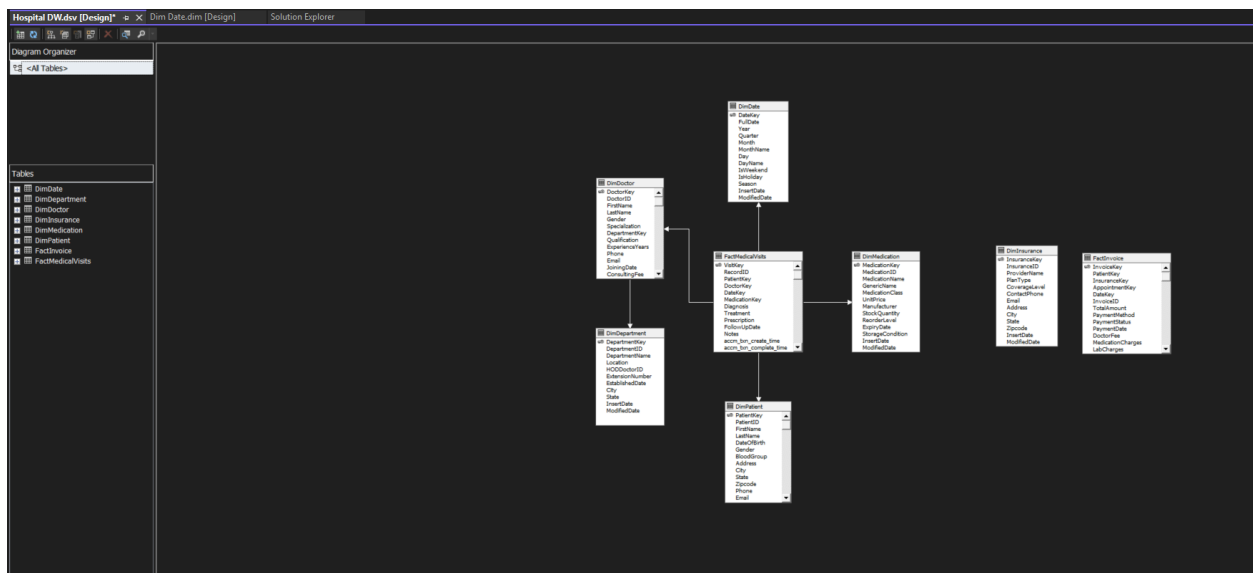

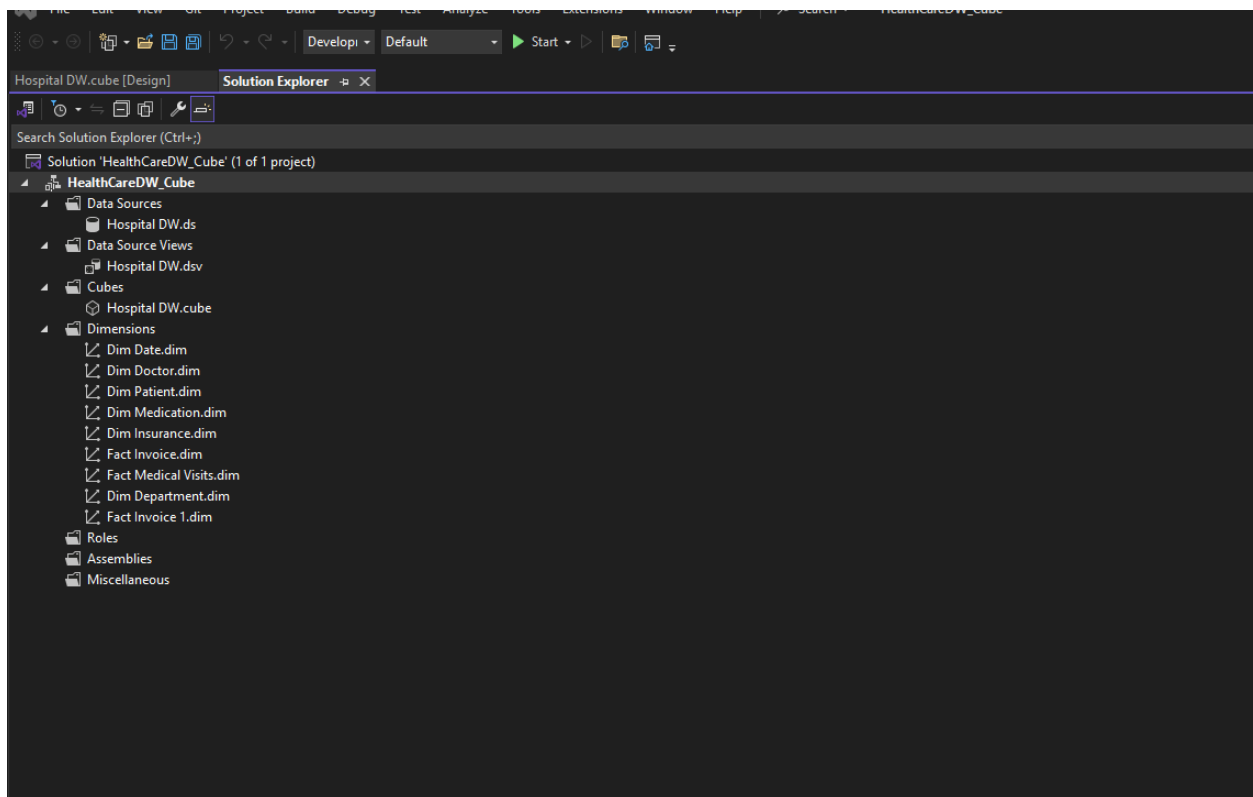

- Year -> Quarter -> Month -> Day

Geography Hierarchy:

- State -> City -> Zipcode

Created Measure Group

- Invoice Measures : From FactInvoice
- Medical Visit Measure : From FactMedicalVisits

DimDate

DimDate

Attributes

- Date Key
- Day
- Day Name
- Full Date
- Is Weekend
- Month
- Month Name
- Quarter
- Year

Hierarchies

- Year_1 (new level)
- Quarter_1 (new level)
- Month_1 (new level)
- Day_1 (new level)

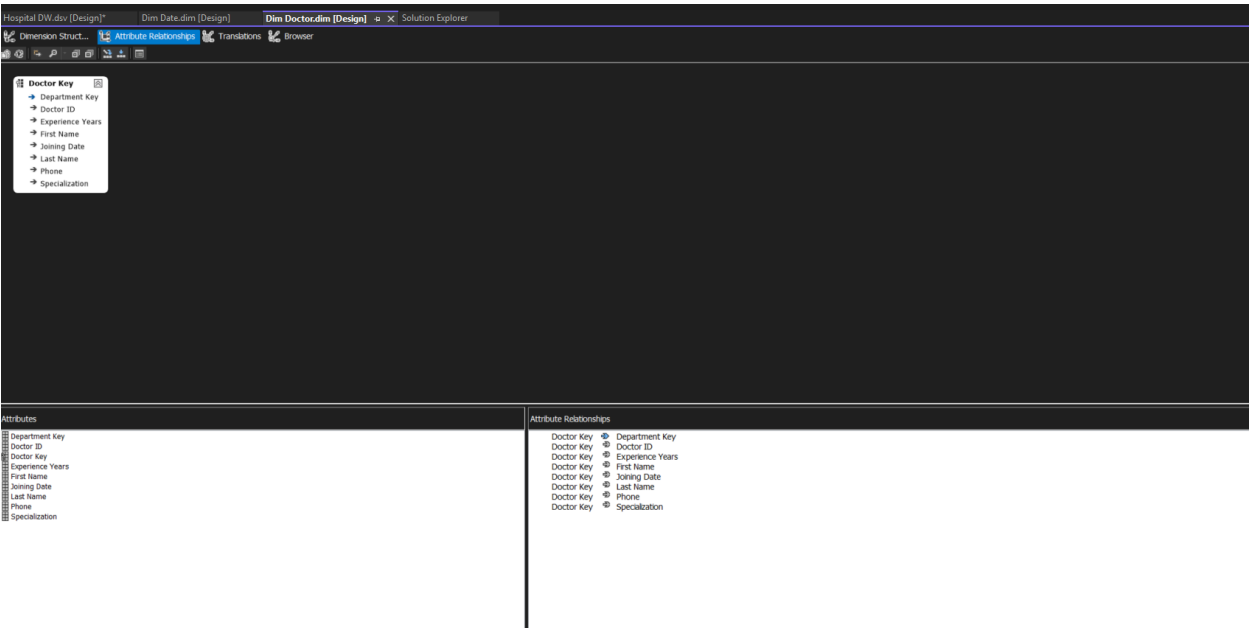

Data Source View

- DateKey
- FullDate
- Year
- Quarter
- Month
- MonthName
- Day
- DayName
- IsWeekend
- IsHoliday
- Season
- InvertDate
- ModifiedDate

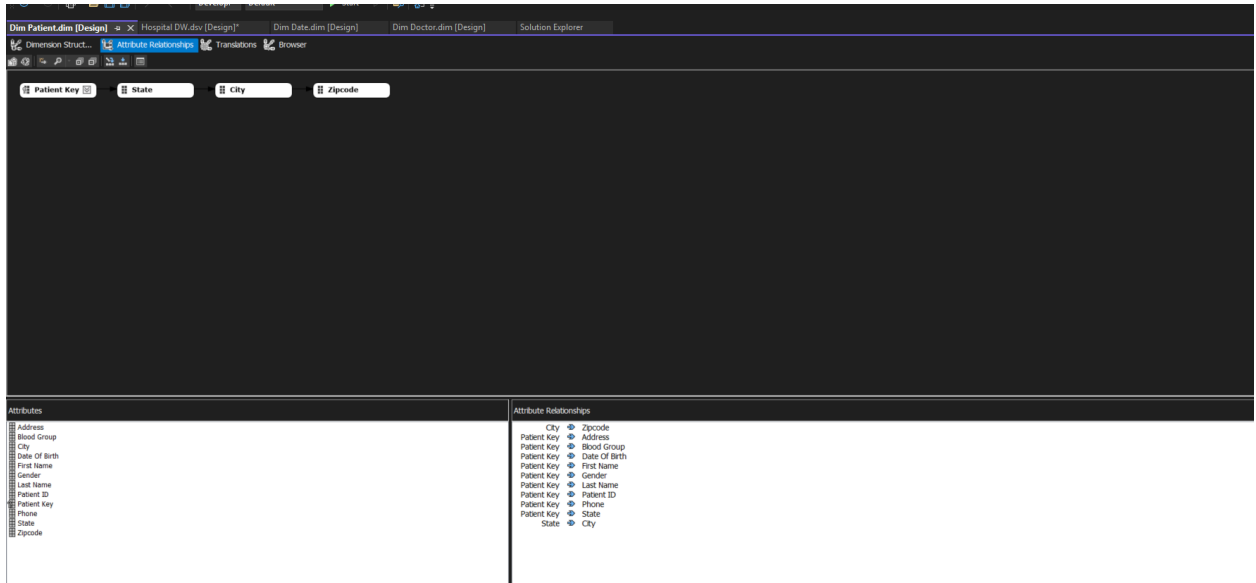

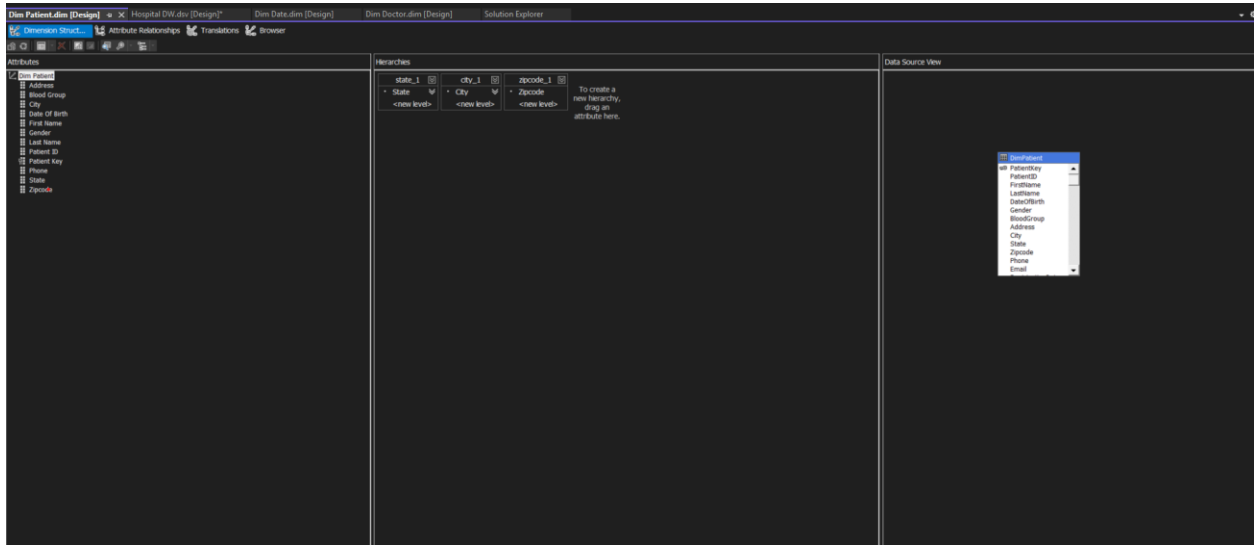

Attribute Relationships

Attribute	Relationship
Date Key	Day
Date Key	Day Name
Date Key	Full Date
Date Key	Is Weekend
Date Key	Month
Date Key	Month Name
Date Key	Quarter
Date Key	Year

DimDoctor

DimPatient

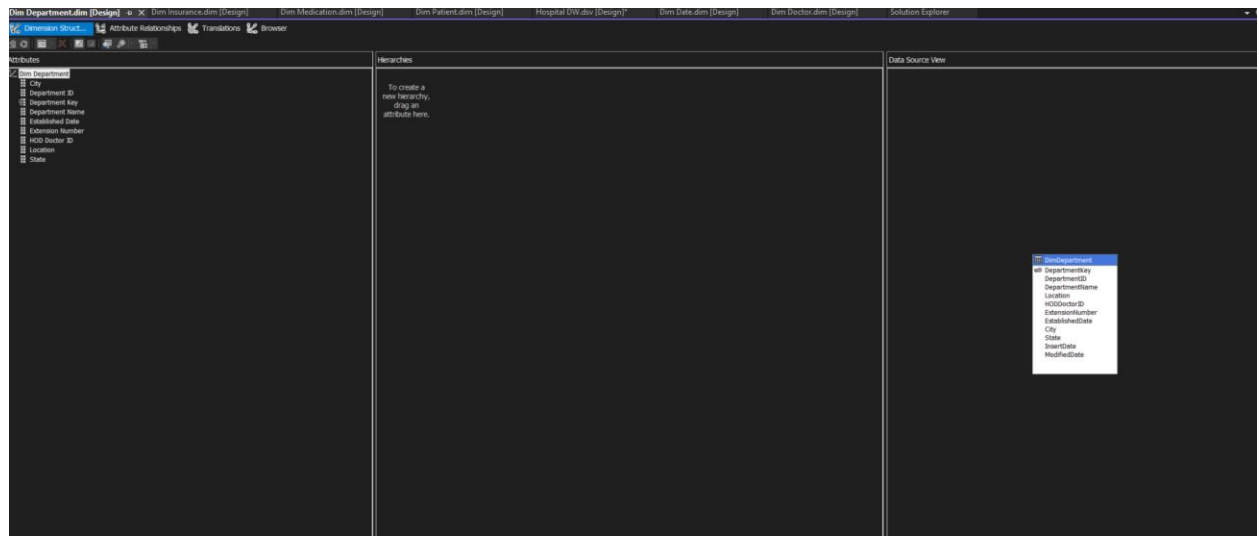

DimMedication

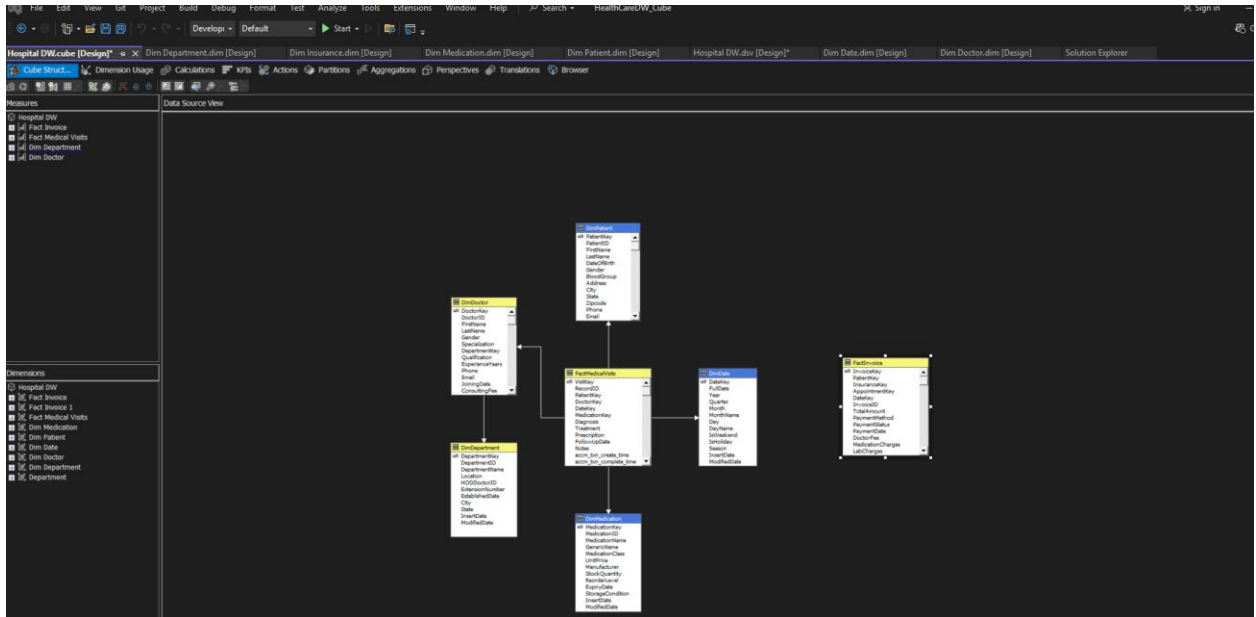

Dim Insurance

DimDepartment

Dimension Usage

Measure Groups

Dimensions	Fact Invoice	Fact Medical Visits	Dim Department	Dim Doctor
Fact Invoice	Invoice Key			
Fact Invoice 1	Invoice Key			
Fact Medical Visits		Visit Key		
Dim Medication		Medication Key		
Dim Patient	Patient Key	Patient Key		
Dim Date		Date Key		
Dim Doctor		Doctor Key		Doctor Key
Dim Department			Department Key	
Dim Doctor (Departme...				Doctor Key

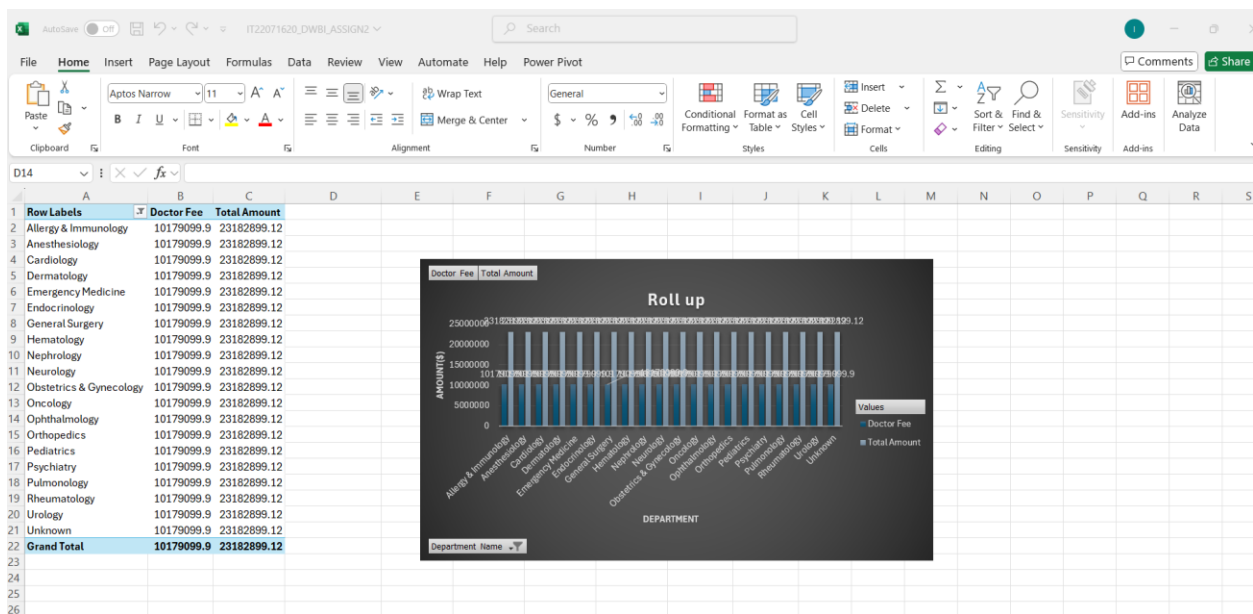

STEP 3

3.1 Demonstration of OLAP Operations

For this Assignment 2 , I Connected Excel to the SSAS cube using the Databat and POWERPIVOT mode . I created the Multiple Pivot tables and Pivot charts to Demonstrate the OLAP operations

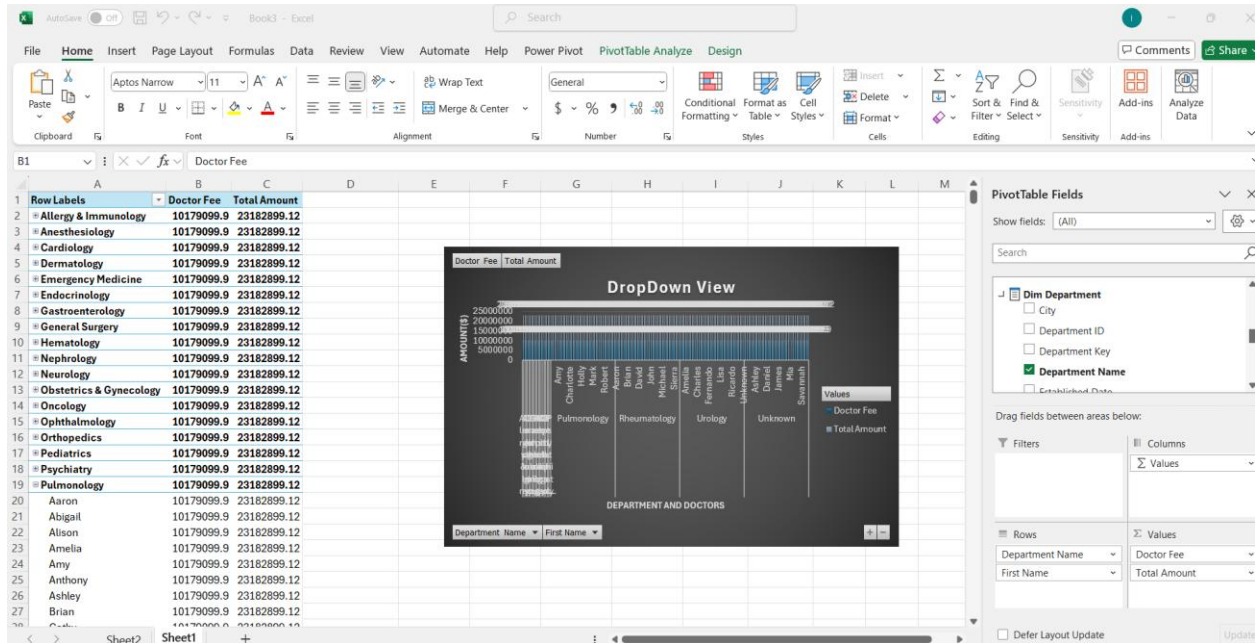

Roll-up

 Roll-up Operation aggregates data from a detailed level to more summarized level in a Dimensional Hierarchy

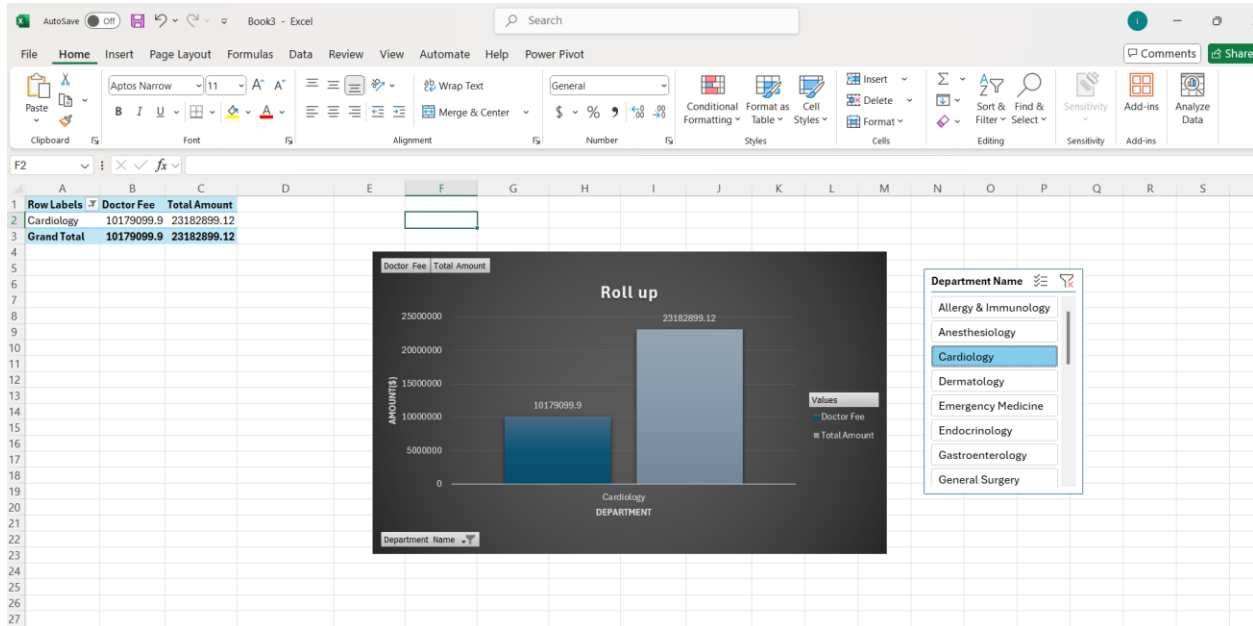

Drill-Down

 Drill-Down Operation navigated from summarized data to more detailed data within a hierarchy

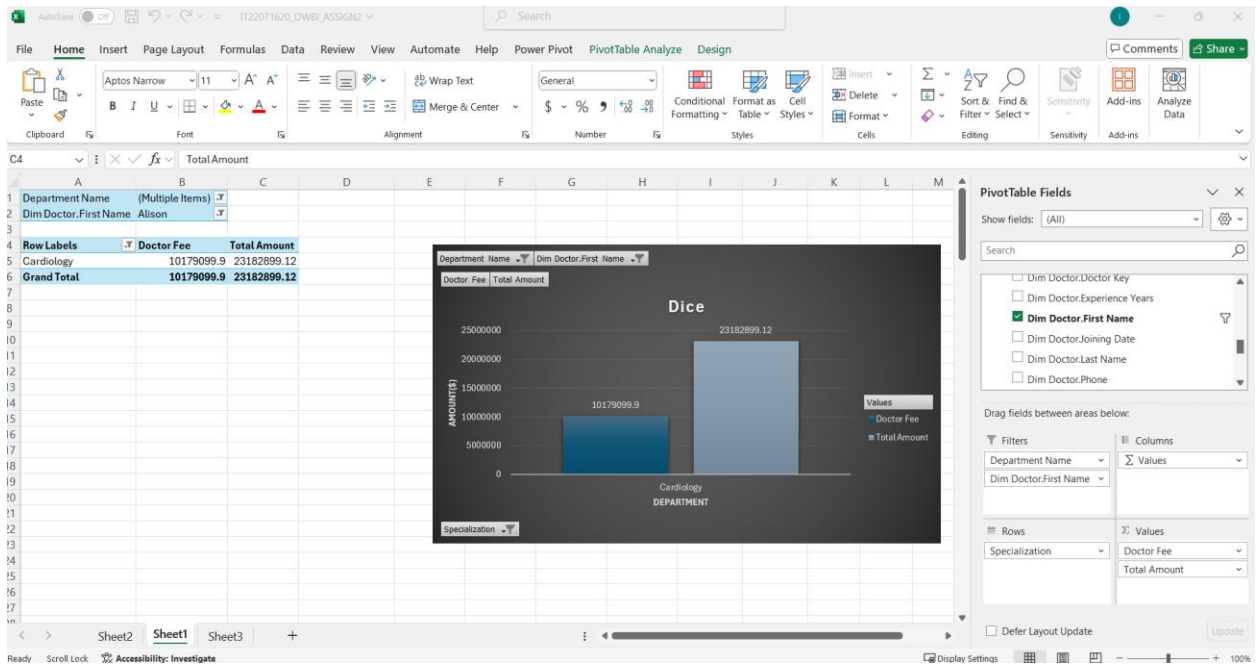

Slice

 Slice Operation reduces the dimensionality of the data by fixing one dimension to a specific value

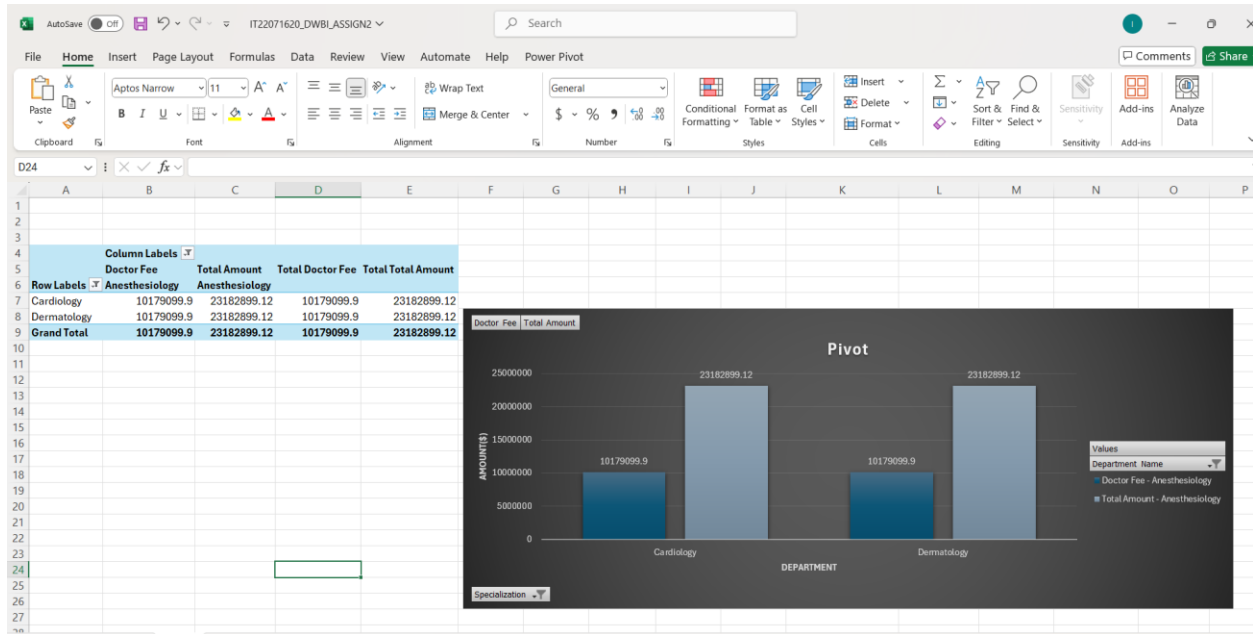

Dice

🎲 Dice Operation created a subcube by selecting specific values from multiple dimensions simultaneously

Pivot

 Pivot operations rotates the data perspective by swapping the dimensional orientations

Step 4 :PowerBI Reports

Based on the DatawareHouse database Tables I prepared the Data for Visualization

Importing the Following Tables into PowerBI

- ✓ DimPatients
- ✓ DimDoctors
- ✓ DimDepartment
- ✓ FactInvoice
- ✓ FactMedicalVisit

Created Calculated Columns and measures using DAX

- ✓ Sum of DoctorFee = SUM(Invoice[doctor_fee])
- ✓ Sum of TotalAmount = Sum(Invoice[total_amount])
- ✓ Count of DoctorID = DISTINCTCOUNT(Doctors[doctor_id])
- ✓ Total Patients = DISTINCTCOUNT(Patients[patient_id])
- ✓ Total Department = DISTINCTCOUNT(Department[department_id])

Report 1: Matrix Visual for Tabular Data

This report allows users to see detailed information about doctorfee and total amounts across different departments and doctors , making it easy to identify the pattern and outliers

Report 2: Multiple Slicers with Cascading Filters

🚀 This provides interactive insights where users can select different departments and specializations to dynamically filter all visuals, enabling multi-dimensional analysis of revenue data

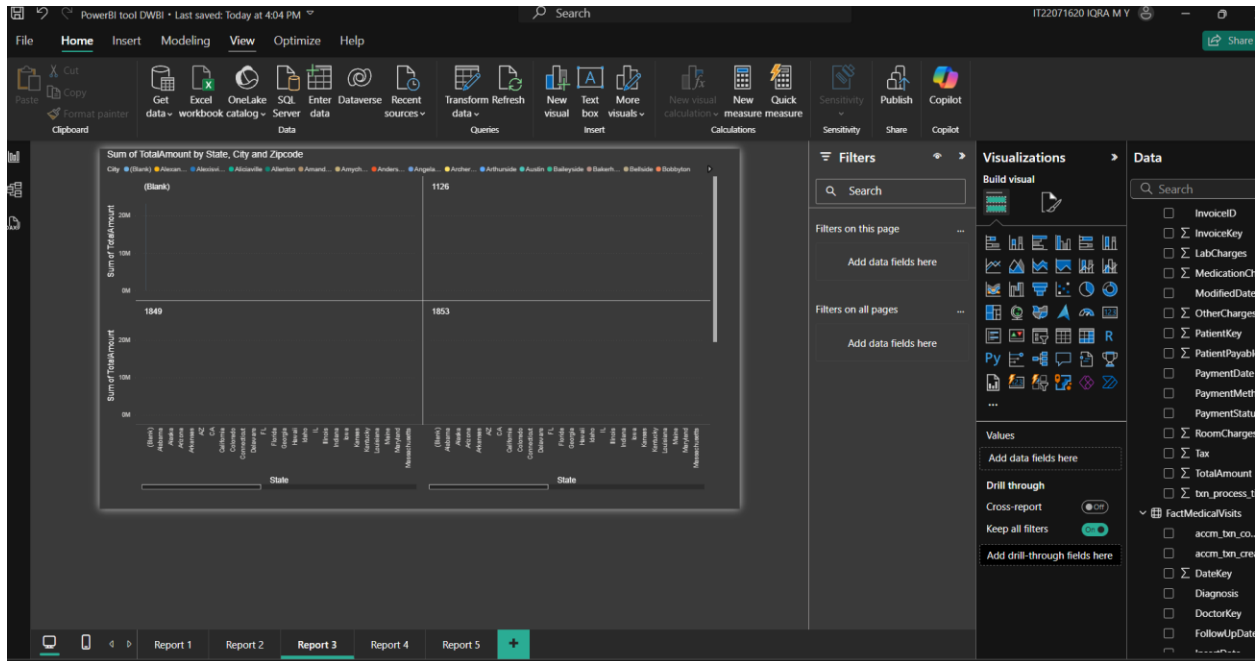

Here I implemented

- Slicer
- Visual design
- DAX

Report 3: Drill – Down Hierarchical Report

- 🚦 This Report enables users to start with a high-level view (by state) and progressively drill-down more to granular levels to analyze revenue distribution geographically

Report 4:Drill-Through

This provides users to right-click on any department in the barchart and drill through to see detailed information about the department. allowing users to analyze the pattern in revenue, department performance , geographical distribution
